

## **Q1. What is Express.js?**

→ **Express.js** is a fast, lightweight, and flexible web application framework for Node.js. It is used to build web applications and APIs. Express.js simplifies the process of managing server-side code by providing features such as routing, middleware, and templating engines. It is popular for building RESTful APIs and single-page applications.

## **Q2. Create a Localhost Server Using Express**

→

```
const express = require('express');  
const app = express();  
app.get('/', (req, res) => {  
    res.send('Server is running on localhost!');  
});  
app.listen(5000, () => {  
    console.log("Server is running at port 5000");  
});
```

## **Q3. Create a Basic "Hello World" App Using Node and Express**

→

```
const express = require('express');  
const app = express();  
app.get('/', (req, res) => {  
    res.send('Hello World!');  
});
```

```
app.listen(5000, () => {  
  console.log("Hello World app is running at port 5000");  
});
```
